<i>School</i>	Pharmacy and Chemistry <input type="text"/>	
<i>Other member of supervisory team (no more than three KU supervisors in total)</i>	Nada Philip	
<i>Specific requirements beyond 2:1 degree</i>	suitable for a graduate in health sciences, Pharmacy, Nursing, Medicine and Computing	

**Project summary**  
**(max 4,000 characters)**

Improving the quality of chronic disease management in the UK is a key health policy objective. One of the aims is to improve patient experience, optimise care and reduce unscheduled clinic visits and hospital admissions.

The aims of this studentship are to test the impact of a telehealth system on improving remote monitoring and management with the ultimate goal of improving patient care and reducing healthcare costs.

The research will also consider the feasibility of integrating this service into the conventional care pathway of patients with chronic diseases. The performance of the proposed service will be evaluated in a healthcare setting. This interdisciplinary project is suitable for a graduate in health sciences, Pharmacy, Nursing, Medicine and Computing
