

Project proposal

<i>Project title</i>	New Strategies for Highly Accurate Absolute Quantification of Proteins via Cell-Free Labelled Protein Synthesis and ICP-MS/nanoESI-MS	
<i>First Supervisor</i>	Dr <input type="text" value=""/>	<input type="text" value="Stephen Barton"/>
<i>Second Supervisor</i>	<input type="text" value="Dr James Barker"/>	
<i>School</i>	<input type="text" value="Pharmacy and Chemistry"/>	
<i>Other member of supervisory team</i> <i>(no more than three KU supervisors in total)</i>	<input type="text" value="Dr Marina Edelson-Averbukh"/> <input type="button" value="▲"/> <input type="text" value="Dr Ali Ryan (SEC) Prof. Wolf-Dieter Lehmann"/> <input type="button" value="▼"/>	
<i>Specific requirements beyond 2:1 degree</i>	<input type="text" value="degree in physical or life sciences"/>	

Project summary
(max 4,000 characters)

Mass Spectrometry (MS) is the primary tool for identification and quantification of biomolecules, including proteins. Quantitative MS proteomics provides new insights into metabolic pathways, cell signalling processes, etc. Highly accurate protein quantification remains one of the key, elusive challenges of modern MS-based biotechnology. Recently, a novel method for accurate, absolute quantification of proteins has been established using cell-free synthesis¹ of stable, isotopically-labelled protein standards with inductively coupled plasma and nanoelectrospray MS (ICP-MS and nanoESI-MS)². In this project, further development of absolute protein quantification strategies based on the ICP-MS will be carried out, aiming to reach unprecedentedly high levels of protein quantification accuracy, which will enable immediate applications of the new technology to challenging biological problems. Several approaches will be undertaken to reach the goal, including incorporation of halogenated amino acids into the protein standards. The project is a unique opportunity for a successful candidate to acquire skills in both atomic and molecular mass spectrometry approaches. The proteomic MS project will be carried out in collaboration with Imperial College London (Dr Marina Edelson-Averbukh) and German Cancer Research Centre (Prof Wolf-Dieter Lehmann).
